

# HART INFECTION CONTROL TAP SPOUT AERATORS

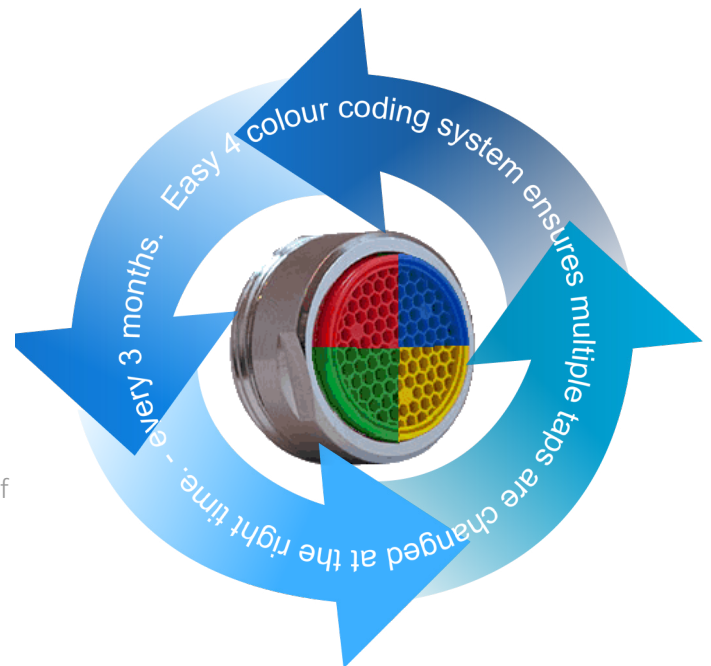

An essential component where legionella prevention is a serious concern

For Hospitals, GP Practices, Care Homes and Education Facilities where infection control is paramount. The tap spout aerators come as a set of 4 different coloured aerators specially designed for the medical, education and care home markets where aerators should be changed on a regular basis to prevent build up of debris and biofilm materials that can harbour infectious pathogenic material.

## INFECTION PREVENTION TAP AERATORS

- Each set contains 4 different coloured aerators, these should be changed regularly (every 3 months) thus removing any contamination build up and provides one years piece of mind. The 4 colours ensure multiple taps are changed at the right time.
- The Aerator produces a laminar flow which does not draw in air thus preventing airborne particles entering the water and therefore almost completely prevents the intake of contaminated aerosol particles.
- Minimal spray formation eliminates risk to the water in terms of microbial growth through legionella or pseudomonas.
- WRAS approved materials

WATER SAVING - CAN  
REDUCE CONSUMPTION  
BY UP TO 50% - 'Z' CLASS  
FLOW CONTROL (7.5-  
9.0L/MIN AT 3.0 BAR)

ONE YEARS  
PROTECTION.  

RECOMMENDED  
FOR CARE  
HOMES,  
ELDERLY USE  
AND SCHOOLS
